## Partners in the provision of unique, premium quality Heating Technology

Steam Generation and British boiler manufacturer Cochran are proud to announce their new partnership in the supply of world-beating industrial boilers and associated equipment. Established in 1878, Cochran were the original inventor of the revolutionary horizontal firetube boiler. The Thompson-Cochran group brought modern package boiler technology to South Africa and as part of Rolls-Royce, Cochran became a leading international boilermaker. Since regaining its independence as a company, Cochran has continued to develop its global business and is now proud to re-enter the market in association with respected South African heat technology company, Steam Generation.

The new partnership will supply Cochran's famous **Borderer**, **Wee Chieftain** and **Thermax** boilers and **heat recovery** boilers, supported by expert installation and maintenance services delivered by Cochran's trusted South African partner, **Steam Generation**.

The boilers, which are manufactured in Annan, Scotland fully comply with the stringent modern EN12953 standard.

Each boiler is independently inspected and certified by the third party insurance inspector. Boilers can also be supplied to BS2790 and ASME codes to meet particular site and customer requirements.
